

<p><i>Model</i> (almost vertical contact)</p>	<p><i>Common-Midpoint</i> Gather at <math>y_0</math></p>	<p><i>Zero-Offset Section</i></p>
 <p>Diagram illustrating a stick figure on a horizontal line. A point <math>y_0</math> is marked on the line. Two lines, <math>v_1</math> and <math>v_2</math>, originate from <math>y_0</math>. <math>v_1</math> is a solid line, and <math>v_2</math> is a vertical line. The angle between <math>v_1</math> and <math>v_2</math> is labeled <math>5^\circ</math>.</p>	 <p>Diagram illustrating a common-midpoint gather at <math>y_0</math>. A horizontal line has a point <math>y_0</math>. A vertical line <math>t</math> passes through <math>y_0</math>. A horizontal line <math>h</math> is above <math>y_0</math>.</p>	 <p>Diagram illustrating a zero-offset section. A horizontal line has a point <math>y_0</math>. A vertical line <math>t</math> passes through <math>y_0</math>. A solid line and a dashed line originate from <math>y_0</math>, representing different offsets.</p>
